FOR IMMEDIATE RELEASE:

SLIM CD Now Includes Mobile Payments Services

SLIM CD, Inc Offers Mobile Payments and SMS Receipts from m.slimcd.com

Coral Springs, FL June 4, 2009 – SLIM CD, Inc a software developer and service provider announces that it has launched its support for payments from cellular phones through its new mobile website, <http://m.slimcd.com>. This website allows any mobile phone with Internet browsing capabilities to accept credit card transactions. In addition, this service provides merchants with options to email or SMS Text the receipts to customers.

“SLIM CD continues to evaluate the marketplace and enhance its bundled product line to encompass emerging technologies”, said Sami Slim, CEO of SLIM CD, Inc. “The inclusion of mobile acceptance for any SLIM CD customer at no additional charge is a fantastic option that provides true mobility for payment acceptance, and completes that offering by providing mobile to mobile transmission of the receipts via SMS Text Messaging.”

The m.slimcd.com website can be used as an alternative to DialPay because it can be used from any browser, including computers, mobile phones, and other devices. The technology includes special techniques to assist in data entry, whereby any alphabetic entries from the mobile device keypad are automatically translated to the appropriate numeric values when entering card numbers, expiry dates, amounts, and other numeric values.

“Rather than limit the focus to a specific type or brand of phone, our approach is focused purely on rapid payment acceptance from any generic mobile phone with an Internet browser.”, said Frank Haggar, Director of Product Development for SLIM CD. “We have tested it on everything from smart phones to traditional flip-top devices. Our unique alpha-translation techniques make data entry a breeze.”

The new SLIM CD website can be accessed by any merchants currently using SLIM CD’s services. The ability to send email receipts to cardholders and SMS Text Receipts to the cardholder’s mobile phone makes this offering a complete package for any type of on-the-go processing.

The Slim CD Pro package includes a stand-alone desktop application, a web-based virtual terminal, a shopping cart and the new m.slimcd.com mobile payment application. The SLIM CD services include gateway services, data on demand and fraud detection services. The SLIM CD Developer’s Kits come in a variety of formats, for POS Developers, WEB Developers, and Hardware Integrators.

The SLIM CD Pro software line runs on any IBM-Compatible Personal Computer with Internet connectivity or that has a modem. The SLIM CD Developers Toolkits can be used from a variety of hardware and operating systems. Low-cost card swipes, signature-capture devices, and receipt printers are supported. An Enterprise Edition is available to perform merchant level recurring billing. More information about SLIM CD, Inc and the SLIM CD products are available at <http://www.slimcd.com>.
