SLIM CD Announces New Batch Processing Software

Slim CD Releases a New Batch Processing Product that Allows Merchants to Process Batched Transactions

Coral Springs, FL Sept 11, 2007 – SLIM CD, INC, a leading POS software developer and service provider, announces the release of its latest creation, a batch processing software product called SLIM Batch. The software contains documentation and examples of file formats. The software can be used to load batch files and send the transactions for processing, or can be run in an unattended environment.

“This new software allows merchants that process batches to submit large groups of transactions to the SLIM CD system for processing”, said Sami Slim, President and CEO of SLIM CD, Inc. “The merchant benefits from the fast SLIM CD transaction processing and, in addition, fraud screening is performed on each transaction per the merchant’s configured specifications within the SLIM CD system.”

Sami Slim continued by explaining: “Merchants that process batches of transactions need to know what was processed, what was approved and what was declined. Our new batch software can automatically produce these PCI-compliant reports so the merchant can quickly identify the results of their batches and take appropriate action for their customers.”

The software runs on an IBM PC-compatible, and uses an Internet connection to send the transactions to SLIM CD for further processing. It can be used by merchants or software developers.

“Another advantage of the SLIM CD system is that it can run in either attended or unattended modes”, said Frank Haggar, Director of Product Development. “The batch processing can be configured to automatically scan a specified computer folder for incoming batch files, process those files, and create the responses in both machine-readable output files and human-readable results reports. This makes the batch processing perfect for integration into mail-order applications, or other recurring billing software that produces credit card processing files.”

The SLIM CD batch software supports sending credit card transactions to most major US credit card processors, including First Data, Nova, Vital, Global Payments, Paymentech, Heartland, Fifth Third, and RBS Lynk.

The SLIM CD software product is distributed through banks, financial institutions, and ISOs. More information about the SLIM CD product is available at <http://www.slimcd.com>, or by calling (877) 475-4623.

About SLIM CD, Inc

SLIM CD, Inc is a wholly owned subsidiary of Online Commerce Corporation (OCC), a privately held E-Commerce service provider. SLIM CD specializes in credit card processing software development for the desktop and the Internet.
